

IN THE CLAIM

Please cancel Claims 1 to 11, without prejudice or disclaimer of the subject matter thereof, and claims 12 to 14 are remained without any amendment. **The claims 12 and 14 are newly added at the response to the office action dated at 06/14/2005, but at this response the states of the three claims are indicated as "previous presented" because they are identical to the claims 12, 13 and 14 dated at 06/14/2005.**

The claim 12 is based on the combination of the original claims 1 to 6 and the definitions about the L and T in Fig. 4 of the present invention. The claims 13 and 14 are identical to the original claims 10 and 11, but now they are dependent to the claim 12. Thereby, it is assured that the new claims are based on the original claims and drawing and thus no new matter is added. The relation of the claims 12 to 14 with respect to the original claims are shown in the following REMARK, Examiners can read the claims more easily from the REMARK.

LIST OF CLAIMS:

Claims 1 to 11 (Cancelled)

Claim 12. (Previous presented) A hand tool, comprising: a main body provided with a mounting portion including a plurality of arcuate protruding faces and a plurality of receiving recesses located between the protruding faces; wherein, each of the receiving recesses of the mounting portion has an arc-shaped corner; a first distance is defined to be a distance between two walls of each recess, where the two wall facing to each other; and a second distance is defined to be a distance from a top to a bottom of each arcuate protruding face; then a proportion of the first distance to the second distance is 1: 1.6;

wherin the protruding faces of the mounting portion are arranged in

an annular manner;

wherein each of the protruding faces of the mounting portion is extended radially inward toward a center of the mounting portion;

wherein the receiving recesses of the mounting portion are arranged in an annular manner; and

wherein each of the receiving recesses of the mounting portion is extended radially outward from the center of the mounting portion; and each of the protruding faces of the mounting portion has an arc-shape.

Claim 13. (Previous presented) The hand tool in accordance with claim 12, wherein the main body has a lower end having an inner wall formed with a hexagonal recess.

Claim 14. (Previous presented) The hand tool in accordance with claim 12, wherein the main body has an upper end having an inner wall formed with a through hole.
